       Subject   Management of user visibility to "Granule Packages"

Description of Problem or Suggestion:

A product granule is actually comprised of a "package" of ESDTs (e.g. data, QA stats, browse, processing history). The DAAC may want to control LIM/DIM visibility of these granule pieces at a "package" level. For example, not have a granule be searchable and orderable until several key ESDTs (data, QA, etc.) are available on the data server.

Originator's Recommendation

Provide mechanisms to view and manage "granule packages" in the system.
